CONTENTS - Volume 10, No. 2

These are papers presented at the Geochemistry Session of the 5th Decennial International Conference on Mineral Exploration, better known as ‘Exploration 07’, which took place in Toronto Sept 9–12, 2007

Part 2

Groundwater in geochemical exploration
M. I. Leybourne & E. M. Cameron 99

An overview of petrochemistry in the regional exploration for volcanogenic massive sulphide (VMS) deposits
S. J. Piercey 119

Developments in analytical technology
B. L. Caughlin 137

Application of 3D geochemistry to mineral exploration
R. G. Jackson 143

Regular papers

Geochemical anomalies in northern Chile as a surface expression of the extended supergene metallogenesis of buried copper deposits
E. M. Cameron, M. I. Leybourne, M. Reich & C. Palacios 157

Mapping of anomalies in continuous and discrete fields of stream sediment geochemical landscapes
E. J. M. Carranza 171

Systematic evaluation of bulk cyanide leach (BCL) parameters affecting extractability of metals from soils
A. W. Rate, J.-M. Vidot, R. E. Hamon, N. W. Radford, W. J. Griffin, L. F. Bettenay & R. J. Gilkes 189

Adjustment of weak partial extraction data assuming metal ion adsorption: examples using bulk cyanide leach
A. W. Rate, R. E. Hamon, L. F. Bettenay & R. J. Gilkes 199

Cover illustration: Airborne hyperspectral (Hymap) image showing hydrothermal alteration associated with high-sulfdation epithermal gold mineralization near Rodalquilar, Almeria province, Spain. Red: Intens alteration, alunite and kaolinite; Green: Alteration, illite; Blue: Unaltered volcanic and sedimentary rock. Viewing direction is east. Width of floodplain approximately 500 m. Vertical exaggeration is 2. Pixel size of the image: 4×4 m. Map produced by F. van Ruitenbeek, ITC, The Netherlands.
