
Use of termitaria in surficial geochemical surveys: evidence for >125-µm size fractions as the appropriate media for gold exploration in northern Ghana

EMMANUEL ARHIN & PROSPER M. NUDE*

*Corresponding author (e-mail: pmnude@ug.edu.gh)

The title of this paper should read: ‘Use of termitaria in surficial geochemical surveys: evidence for <125-µm size fractions as the appropriate media for gold exploration in northern Ghana’. The less-than symbol was replaced by a more-than symbol in the typesetting of the paper.

The publishing house apologizes for this mistake and thanks the authors for their understanding in this regard.
